SERI RESORT

Staff Operations Manual

How to do your job on the system, step by step: waiters, cashiers, supervisors, kitchen, stores, accounts, managers, IT and the website.

Edition 1 · 8 October 2026

Internal use · SERI Resort staff only

Contents

Read chapters 2 and 17 first, then your own chapter. Chapter 1 shows which chapters are yours.

1 How to use this manual

This manual shows every person at SERI Resort how to do their own job on the system, one step at a time. You do not need to read all of it: read chapters 2 and 17, then your own chapter.

If you are a...	Read chapters
Waiter or bartender	2, 5, 17, 18
Cashier (restaurant, cafe, supermarket, spa, salon)	2, 6, 17, 18
Reception cashier	2, 6, 7, 17, 18
Supervisor	2, 6, 8, 17, 18
Kitchen or bar screen staff	2, 9, 18
Sports Entrance or Sports Store attendant	2, 10, 18
Storekeeper or procurement	2, 11
Accountant	2, 12, 17
Manager	2, 3, 4, 13, 17
Owner or IT administrator	2, 3, 14, 18
Marketing or website editor	2, 15
Anyone helping customers who book online	16

Every role chapter is laid out the same way: **Your job**, **Your device**, **Start of shift**, **During the shift**, **End of shift**, **Never do this**, and **If something goes wrong**.

Words in **bold** are the exact names of buttons and screens as you see them. If your screen looks slightly different, the steps are still the same.

This manual was written from the system as built on 8 October 2026. Where a rule can be changed by the manager in the admin portal, the chapter says so. Where something still needs confirming, it is marked **Check with IT**.

START HERE

2 Quick start for everyone

Everyone signs in as themselves with a staff number and PIN, and follows the same seven golden rules. This chapter covers both.

The devices

Device	Who uses it	What it is for
Waiter tablet (Android)	Waiters, bartenders	Take orders, send to kitchen or bar, print the bill, collect payment at the table
Supervisor tablet (Android)	Supervisors	Approve or reject voids, discounts, comps and price changes
Cashier POS (Windows PC)	Cashiers, Reception	Sell, take payment, confirm waiter collections, receive cash, bookings
Kitchen or bar screen (KDS)	Kitchen and bar staff	See incoming tickets and move them to Ready
Sports Entrance / Sports Store tablet	Gate and store attendants	Scan QR tickets, release and return equipment
Admin portal (web browser)	Manager, accountant, owner, IT, marketing	Reports, staff, prices, setup, website

The admin portal is at `https://admin.seriresorts.com`. Open it on a computer, not on the tablets.

Signing in

1. Type your **Staff number** and your **PIN**, then press **Sign in**. (On the POS the PIN pad is on screen.)
2. Or tap your staff card on the reader, then type your PIN. A card alone never signs you in.
3. If you do not have a PIN, use **Use password instead** and type your username and password.
4. Waiter tablets then ask you to **Check out this tablet**: pick the facility where you work this shift and press **Check out tablet**.

Five wrong tries lock your account for 15 minutes. If that happens, see a supervisor.

Locking and signing out

- A tablet locks itself after 5 minutes without use and shows **Tablet locked**. Type your PIN to continue, or press **Not me - sign out** if it is not yours.
- The POS locks after 15 minutes and asks you to sign in again.
- The kitchen screen locks after 2 minutes but stays visible. Tap any button to sign in.
- Always sign out when you leave your station.

The seven golden rules

1. **Sign in as yourself.** Never use someone else's PIN or card. Everything you do is recorded under your name.
2. **A waiter never marks a bill paid.** A waiter records what was collected; a cashier confirms it.
3. **Printing the bill freezes the order.** Nothing can be added, removed or discounted until a supervisor reopens the bill.
4. **Sent items cannot be changed.** To add more, start a new order on the same table.
5. **Voids, discounts, comps and price changes need a supervisor's approval** unless your role is allowed to do them.
6. **Count cash with the other person watching.** Cash handovers and shift counts are always counted in front of both people.
7. **If the connection drops, do not repeat the action.** Read the banner on the screen first (chapter 18).

START HERE

3 Roles at a glance

What you can do on the system depends on your role, and the system enforces it: a button you are not allowed to use is hidden or refused. The table lists the 12 standard roles.

Role	Main job	Can do	Cannot do, or needs approval
Owner	Runs the business	Everything. Signing in from outside the property needs a second code (MFA)	Nothing is blocked, but every action is recorded
Manager	Runs the property	Staff, prices, setup, reports, and everything a supervisor can do	Cannot give a role higher than their own
Accountant	Money and reports	Reconcile settlements, financial reports, approve refunds and reversals, view cash handovers	Cannot sell, take payment or change prices
Cashier	Takes payment	Sell, take and split payment, settle orders and tabs, run the cash drawer, confirm waiter collections, receive cash handovers	Voids, refunds, comps, price changes and reopening a bill need a supervisor
Waiter	Serves tables	Take orders, send to kitchen, serve, print the bill, record payment collected at the table, hand cash to the cashier	Cannot mark a bill paid. Cancelling a printed bill needs a supervisor
Bartender	Serves drinks	Same as a waiter for bar orders, and moves bar tickets	Same limits as a waiter
Kitchen staff	Cooks	See kitchen tickets, move them along, mark an item unavailable	Cannot take orders or see money
Storekeeper	Stock	Receive, transfer and count stock, release and return rented equipment	Stock adjustments need a supervisor's approval
Unit supervisor	Floor authority	Approve voids, discounts, comps and price changes, sign off cash variances, close another person's cash session, operational reports	Cannot approve their own requests
Procurement	Buying	Suppliers and purchase receipts	Nothing on sales or cash
IT administrator	Systems	Devices, sessions, security events, audit log, connection settings	Never finance, pricing or approvals
Marketing	Website	Edit and publish website pages, blog, events, gallery, read the contact inbox and subscribers	Nothing on sales, staff or setup

Execute and approve. Some actions have two levels. A person who may *execute* an action (for example a cashier asking for a void) needs a person who may *approve* it. Supervisors, managers and the owner approve voids, discounts, comps and price changes. The accountant also approves refunds and reversals. Nobody can approve their own request.

The manager can create custom roles and change what a role may do (admin portal, **Roles & permissions**), so your property may differ slightly from this table.

START HERE

4 Facilities at a glance

Each facility has its own way of taking orders and being paid, set by the manager in the admin portal. The table shows the setup at launch; ask your manager if yours was changed.

Facility	What happens there	How it is paid	Food and drinks come from
Main Reception	Bookings, tickets, memberships, equipment rental, counter sales	Pay first at the desk. Cashier must have an open cash session. Pays for Pool, Sports and Pool Bar visits	n/a
Restaurant	Table service, customer tabs	Pay after service (the order must be served first)	Main Kitchen; drinks from Restaurant Bar
Indoor Club	Table service, tabs, member discounts	Tab, paid when the customer leaves	Main Kitchen; Club Bar
Beauty Spa	Appointments in 3 treatment rooms, memberships	Paid at the facility, cash session required	n/a
Salon (Male, Female)	Appointments, 3 and 4 chairs	Paid at the facility, cash session required	n/a
Pool Area	Entry with QR ticket	Tickets are bought at Reception	n/a
Pool Bar	Drinks and food at the pool, tabs	Paid at Reception	Pool Bar
Bush Bar	Table service, tabs	Pay before leaving	Main Kitchen; Bush Bar
Event Centre	Events for up to 300, tickets, tabs	Paid at the desk or on a tab	Event Bar
Cafe, Cyber Cafe	Counter sales; Cyber Cafe has 10 bookable PCs in 30-minute slots	Cash session required	Cafe Barista
Sports Arena	Football pitch, 2 lawn tennis courts, basketball court in 60-minute slots	Booked and paid at Reception	n/a
Sports Store	Rented equipment	Paid at Reception, released against the QR ticket	n/a
Supermarket, Super Store	Retail with barcode scanning	Cash session required	n/a
Main Kitchen, Smaller Kitchen	Cook for the restaurant, club, bars, cafe and event centre	n/a	n/a

Three ways payment works.

- **Pay first:** the customer pays before anything is sent or prepared.
- **Pay after service:** the order is sent, prepared and served, then paid. The cashier can only take payment on a *served* order.
- **Tab:** many orders are added to one customer tab and settled once, in one payment, at the end.

Your screen follows the facility you are working in, so you do not need to remember which is which. If a button is missing, it is usually because that facility does not use it.

5

ON THE FLOOR

Waiter and bartender (tablet)

Your job: take orders at the table or bar, send them to the kitchen or bar, serve them, print the bill and record the money you collect. You never mark a bill as paid; the cashier does that.

Your device: the waiter tablet.

Start of shift

1. Sign in with your staff number and PIN (chapter 2).
2. On **Check out this tablet**, pick where you are working this shift and press **Check out tablet**. The tablet is now recorded against you and that facility.
3. If it says **No facilities are assigned to you**, ask a supervisor. If it says the tablet is already checked out, the last person did not return it; ask IT or a manager to check it in.

Taking an order

1. Tap a table. For a customer without a table, use **Customers / tabs**, press **New**, type **Customer name or lounger / seat** and press **Start order**.
2. Press **Open table** or **Take order**. Pick a category on the left and tap items to add them.
3. In the item sheet choose any extras or required options, type a note if needed (for example *no pepper*), then press **Add to cart**.
4. Check the cart. **Estimated total** is only an estimate: final prices and tax are set by the server.
5. Press **Send order**. Sending locks the items. If the customer wants more later, add it as a **new order** on the same table or tab.

Each line shows its progress: ROUTED, ACCEPTED, IN PROGRESS, READY. When food or drink is ready the tablet plays a sound and shows **Order ready to serve**. Serve it, then press **Mark served**.

Voids, discounts and comps

- **Void order:** if you may void, press it and confirm. If the button says **Void (supervisor)**, a supervisor types their **Supervisor staff number** and PIN and presses **Authorise**.
- **Adjust** an item: choose *Discount %*, *Discount amount*, *Price override* or *Complimentary (comp)*, type the **Reason (required)** and press **Apply**.
- If you are not allowed, the tablet says **Sent to a supervisor for approval** and the order shows **Waiting for a supervisor to approve**. The order is locked until they decide.

The bill and collecting payment

1. When the customer asks for the bill, press **Print bill**. The tablet says **Bill sent to the printer**. **The order is now frozen.**
2. The bill panel shows **Bill printed, awaiting payment** with *Amount due*, *Confirmed*, *Pending cashier* and *Remaining*. If you may not print bills, it says to ask the cashier.
3. Press **Take payment**. **Amount to pay now** is filled in with what remains. Part payments are fine; the rest can use another method.
4. Pick how the customer pays:
    - **Cash:** type the amount and the cash received. The tablet shows **Change to give**. Press **Record cash collected**.
    - **Card machine:** charge the customer on the bank machine, then type the **Approval code** from the slip (last 4 digits and slip reference are optional).
    - **Transfer:** show the account on screen, which is only for this bill, and ask the customer to transfer exactly the amount. Type a **Bank reference** if you have one.
    - **Pay link:** the tablet shows a QR code and link. Wait for **PAID - Confirmed by the payment provider**, then press **Done**.
5. After cash, card machine or transfer the tablet says **Recorded. Waiting for the cashier to confirm - the bill is not paid until then.** Tell the cashier. They check the slip, alert or cash and confirm it.

Pay link and transfer need a connection. Printing the bill and handing over cash also need the network.

Your cash

Tap the wallet icon, **My cash**, to see **Cash in hand**, your limit, **Pending cashier** and **Collections today**. Some facilities do not allow waiters to hold cash: then **My cash** is hidden and the tablet says **Cash goes to the cashier**.

To hand over: press **Hand over to the cashier**, count the money, type it in **Cash you are handing over (count it)**, add a note if you like and press **Hand over to cashier**. Walk to the cashier, who counts it in front of you. The result shows *Received*, *SHORT* or *OVER*.

If you reach your limit, the tablet says **Hand over your cash first**. Press **Hand over now**, then take the payment.

End of shift

1. Make sure every order is sent and every collection is recorded.
2. Hand over your cash.
3. Open the menu and choose **Return tablet (end of shift)**, then **Return tablet**. Use **Sign out (keep tablet)** only if you are coming back.

Never do this

- Never tell a customer a bill is paid before the cashier confirms it.
- Never take payment again for a bill the tablet shows as already collected.
- Never keep cash above your limit or overnight.
- Never lend your tablet while you are signed in.

If something goes wrong

See chapter 18: banners such as **Reconnecting to the server**, orders marked **PENDING CONFIRMATION**, and what to say to the supervisor.

Facilities where you serve and take payment yourself (waiter-only)

Some facilities have no kitchen screen and no cashier yet. There the tablet shows two extra buttons at the top: **My tabs and payment** (the banknote icon) and **Hand over tabs** (the two arrows). Nothing goes to a kitchen screen and nobody confirms your payments, so be careful and honest with every step.

1. Take and **send** the order as usual.
2. When the customer has been served, open the order and press **Mark served** (or do it from **My tabs and payment**).
3. Open **My tabs and payment**. Tick every tab the customer is paying for, even from different tables, and press **Take payment**.
4. Choose how they paid: **Cash**, **Card / POS machine** or **Bank transfer**. For card and transfer you must type the slip number or transfer reference. If the customer pays part in cash and part by transfer, press **Split** and add the second method. The amounts must add up exactly.
5. For cash, type what the customer gave you to see the change. Press **Confirm received**.
6. The tab closes and the receipt is issued. Press **Send receipt to printer** and it prints at the POS terminal or in the office.

The cash you take stays your responsibility until you hand it to your supervisor with **My cash** > **Hand over to the cashier**. Never keep it until the next day.

Handing your tabs to a colleague (end of shift, or you are called away): open **Hand over tabs**, choose the colleague and press **Send hand-over**. The tabs stay yours until they open the same screen on their tablet and press **Accept**. If they do not accept within 30 minutes the request expires.

Never do this: mark a tab as paid before you have the money or the slip; take payment for another waiter's tab (ask a supervisor); hand over a tab without telling the colleague.

ON THE FLOOR

6 Cashier (POS)

Your job: take payment, confirm what waiters collected, receive their cash, and keep your cash drawer correct.

Your device: the cashier POS (Windows). The tabs along the side depend on your facility and your permissions: **Sell**, **Tables & tabs**, **Reception**, **Collected by waiters**, **Cash handover**, **Approvals**, **Cash session**, **History** and **Queue**. Only **Queue** is always there. The top bar shows **Online**, or **OFFLINE: server unreachable**.

Start of shift: open your cash session

1. Sign in with your staff number and PIN.
2. Open **Cash session**. It says **No cash session is open** until you start one.
3. Type **Opening float (cash already in the drawer)** and press **Open cash session**. You see **Cash session opened.**

You cannot take or confirm cash without an open session: the POS says **Open a cash session before taking cash.**

Selling at the counter

1. In **Sell**, pick a category and tap items, use **Search items**, or scan a barcode into **Scan barcode / SKU (then Enter)**.
2. Quick notes such as *No ice* or *Takeaway* can be tapped before adding an item.
3. Check the cart: *Subtotal*, *Discount*, *Tax* and **TOTAL**. If the POS is offline it shows **ESTIMATE** instead; the server prices it later.
4. At a facility with a kitchen or bar, press **Send**. At **pay after service** facilities, press **Mark served** when it is served. If it says **Some items are still being prepared**, wait.
5. Press **Pay**.

Taking payment

1. In **Take payment**, check **Amount to pay now**. A smaller amount makes it a partial payment.
2. Pick the **Payment method**: **Cash**, **POS terminal** or **Bank transfer**. For cash, type the **Cash handed over**; the system works out the change.
3. For a terminal or transfer, type the **Terminal / transfer reference**.
4. To split between methods, press **Add tender**, add each part, and watch **Entered** and **Still to enter** until nothing is left.

5. Customer pays on their phone instead? Choose the pay-link, type the **Customer email** and press **Create pay-link**. When the customer says they have paid, press **Check payment**.
6. You see **Payment recorded.** and the receipt prints. A reprint is marked DUPLICATE.

The same card or transfer reference cannot be used twice.

Tabs

1. In **Tables & tabs**, press **Open a new tab**, type the **Customer name** and optionally the **Table**, then **Open tab**.
2. Each round is an order in **Sell**. Press **Send** for each round.
3. At the end, send the current order, then press **Settle tab**. This opens **Take payment** for the whole balance.

Confirming what waiters collected

Open **Collected by waiters**. **Money below is NOT in the till yet.** Check the slip, bank alert or cash against each line.

- **Match:** press **Confirm**, type the reference you see (optional), then **Confirm payment**. The order is settled and the receipt prints. Confirming cash needs your own open cash session.
- **Does not match:** press **Reject**, type a reason of at least 3 characters and press **Reject and alert supervisor**. The bill stays unpaid and a supervisor is alerted.

You cannot confirm money you collected yourself. Pay-link and per-bill transfer payments are confirmed by the payment provider, not by you. Unconfirmed collections expire on their own after 30 minutes and the supervisors are alerted.

Receiving a waiter's cash

1. Open **Cash handover**. A waiter's handover appears under **Cash handovers from waiters**.
2. Press **Count and receive**. It shows what the waiter **Declared**. Count the notes with the waiter watching, type the **Counted amount (naira)** and press **Record count**.
3. The result is *Matches the declared amount*, *SHORT by…* or *OVER by…*. A difference over N500 needs a supervisor to press **Sign off variance**. You cannot sign off a handover you received.

You cannot receive your own handover.

Bills, voids, discounts and comps

- **Print bill** prints an 80 mm bill marked NOT A RECEIPT. The order is now frozen (**BILL PRINTED**). To change it, press **Reopen bill**; this needs a supervisor.
- **Void order**, **Discount**, **Comp**, **Price**, **Reopen bill**, **Refund** and **Reverse** all open the approval box. Type the **Reason** (it is kept in the audit trail) and the value, then choose one:
    1. Tick **A supervisor is here** and let them type their staff number and PIN on your POS: it is approved at once.
    2. Leave it unticked and press **Submit**: the request goes to the supervisors' devices and your screen waits. If nobody answers in 10 minutes, check **Approvals** later.

History: reprint, refund, reverse

Open **History**. Pick a payment, then **Reprint** a receipt, **Refund** (enter the amount; part or all) or **Reverse** (a same-session correction such as the wrong method; the order becomes payable again). Refunds and reversals need supervisor authorisation.

End of shift: close your cash session

1. Open **Cash session**. Count the drawer. The system figure is hidden until you close (a blind count).
2. Type **Counted cash** and an optional note, then press **Close cash session**.
3. You see *Declared*, *system* and *variance*. Press **Print shift report** to keep a copy.
4. Sign out.

Never do this

- Never take payment on a bill the POS says is **COLLECTED BY WAITER**: confirm or reject it in **Collected by waiters** instead.
- Never confirm a collection you have not checked against the slip, alert or cash.
- Never leave a cash session open overnight.
- Never process an offline cash payment as if it were final (chapter 18).

If something goes wrong

See chapter 18. The **Queue** screen shows anything waiting to be confirmed.

ON THE FLOOR

7 Reception

Your job: sell court bookings, spa and salon appointments, pool tickets, equipment rentals and memberships at the desk, and hand the customer a QR ticket.

Your device: the cashier POS, **Reception** tab. Everything in chapter 6 (cash session, payment, receipts) applies too. Reception pays for the Pool, Sports Arena and Pool Bar, so most customers pay here.

Bookings need a live connection. A slot is scarce, so a booking can never be saved offline. If the POS is offline, wait for the connection.

Booking a slot and taking payment

1. Open **Reception**. Under **What to book**, pick the court, pitch, room or PC.
2. Pick the day with the **<** and **>** buttons and the number of **People** with **-** and **+**.
3. Tap a time slot. Each slot shows if it is open, full or has places left, and its price.
4. Type the **Customer name**, or press **Find a member** to link a member. A walk-in does not need a member record: a name is enough.
5. Press **Hold this slot**. The POS says **Slot held. Add rentals if needed, then take payment before the hold expires.** The hold runs out after 15 minutes, so do not leave it.
6. For equipment, press an item under **Add equipment rental**. You see **Added <item>.**
7. Press **Take payment and print QR ticket** and take payment as in chapter 6. You see **Booking confirmed.**
8. Hand over the printed QR ticket. It says **Scan at the gate. One use per ticket.** A group gets one QR per person.

If the customer changes their mind, press **Release hold**.

If the slot or ticket has a problem

You see	What to do
That slot was just taken. Pick another.	Choose another slot. Nothing was charged.
The hold expired. Start the booking again.	Hold the slot again.
Payment taken, but the ticket QR could not be issued	The money is safe. Open **History** and reissue the ticket from there.
Bookings need a live connection to the server	Wait until the POS shows **Online**, then try again.

Memberships

Members are signed up at Reception or buy online. **Find a member** links an existing member to a booking. Plans, prices, discounts and visit limits are set up by the manager in the admin portal (chapter 13). The admin portal screen **Memberships** only shows members; it does not create them.

Online bookings

Customers also book on the website. If a customer shows a reference or QR ticket from the website, see chapter 16.

Never do this

- Never hand over a ticket before the payment shows **Payment recorded.**
- Never promise a slot you have not held.
- Never let a hold expire with the customer standing there: release it or pay for it.

8

ON THE FLOOR

Supervisor

> **Your job:** be the second pair of eyes. You approve or reject sensitive requests, sign off cash differences, and keep the floor moving. You can never approve your own request.

Your devices: the supervisor tablet, the **Approvals** tab on the POS, and **Approvals** in the admin portal.

What needs your approval

Request	When it reaches you
Void a sent order	Always. Voiding an unsent draft needs no approval unless the facility rule says so
Comp (free item)	Always
Price override	Always
Discount	Above the facility's limit (N10,000 at Reception, N5,000 at the restaurant, club, spa and bush bar at launch), or always if the facility lists it
Refund or reversal of a payment	Above the facility's limit, or always at limit 0
Cancel or reopen a printed bill	Always, and printing again after a cancel also needs you
Stock adjustment, attendance clock correction	When requested by the storekeeper or staff

A paid order cannot be voided: it needs a refund or reversal first.

Approving on the supervisor tablet

1. Open the **Approvals** tab. The badge shows how many are waiting. **Live orders** shows every order (filter **Awaiting approval**), and **Tables & tabs** shows what is occupied.
2. Each card shows **Requested by <name>**, what is asked and the reason.
3. Press **Approve** or **Reject**. The box is titled **Approve: <summary>** or **Reject: <summary>**. Type a note (a reason is wise when rejecting), type **Your PIN** and confirm.
4. The waiter's order unlocks straight away.

Approving at the till (in person)

When someone ticks **A supervisor is here**, you type your **Supervisor staff number** and **Supervisor PIN** on their screen. It approves that one action at once. Your sign-in is valid for 5 minutes and one use, and it is recorded.

On the POS **Approvals** tab you can also press **Approve** or **Reject** on any waiting request, with an optional note.

Before you approve, check

1. Who asked, and for what item and amount?
2. Is the **Reason** believable and written?
3. Is the customer or the situation really there? Look at the table.
4. Is it within what you allow? When unsure, reject and ask the manager.

Cash differences

When a cashier counts a waiter's cash and the difference is more than N500, it waits for you. On the POS open **Cash handover** and press **Sign off variance**, add a note and confirm. You cannot sign off a handover you received yourself.

You can also close another cashier's cash session if they have left.

Alerts to watch

- A rejected waiter collection alerts you at once: find out why the slip or cash did not match.
- A collection that expired after 30 minutes without confirmation alerts you. Expired cash stays the waiter's responsibility until it is sorted.

Never do this

- Never approve from memory of a conversation: read the request.
- Never give your PIN to anyone so they can "approve" for you.
- Never approve a comp or price change for yourself or a friend.
- Never sign off a variance you did not witness being counted.

If something goes wrong

Approvals needs a connection. If the tablet shows **Reconnecting**, you cannot decide until it is back, and nobody can send a new request either, because approvals are never saved offline. See chapter 18.

Waiter-only facilities: open tabs and payment

On a waiter-only facility your tablet shows **Open tabs and payment**. It lists every unpaid tab with the waiter looking after it, and a total per waiter at the top. You can:

- press **Pay for waiter** to take the payment yourself (cash, card or transfer). The payment is recorded under your name and the waiter's;

- press **Move to another waiter** and give a reason (the waiter left, was sick). It moves at once and the reason is kept in the audit log;
- at closing time, check that no tab is left unpaid, then receive each waiter's cash handover in the admin portal under **Cash handovers**.

9

ON THE FLOOR

Kitchen and bar screens (KDS)

Your job: cook or pour what comes in, and tell the waiter it is ready by moving the ticket along.

Your device: the kitchen or bar display screen. Each screen shows only the tickets for its own station: food lines go to the kitchen screen and drink lines to the bar screen.

First time on a screen (IT does this once)

1. IT gives a one-time registration code (admin portal, **Devices**).
2. On the screen, type a **Screen name** and the **Registration code**, then press **Register this screen**.
3. Pick **Which station is this screen?** The choice is remembered. You can change it later from the menu.

If the screen says it is **no longer registered**, ask IT for a new code.

Start of shift

1. Tap any button. The **Staff sign-in** screen asks for your **Staff number, or tap your card**, then your PIN. A card alone does not sign you in.
2. Some accounts see **View only**. They can watch the board but not move tickets.

The screen locks after 2 minutes without use. It stays visible and live, but you must sign in to press anything.

The board

There are three columns: **New**, **In progress** and **Ready**. Each ticket shows the table, the order number, the waiter, the items with extras and notes, and a timer.

- The timer turns **amber at 5 minutes** and **red at 10 minutes**. You can change these in the menu under **Ticket colours (minutes)**.
- A chime sounds for each new ticket. The sound can be turned off in the menu.
- The small status shows **Live**, **Syncing…**, **Reconnecting…**, **Server degraded** or **Signed out**.

Moving a ticket

Press the button on the ticket. It changes as you go:

1. **Accept** when you have seen it.
2. **Start** when you begin cooking or pouring.
3. **Ready** when it is done. The waiter's tablet plays a sound and shows **Order ready to serve**.
4. **Served** when it has left the pass. The ticket disappears from the board.

If another screen moved the ticket first, you see **Ticket #n was just updated. Check it and tap again.**

Cancelled tickets leave the board by themselves.

The menu (the three-line button)

Change station, **Lock screen**, **Sign out**, **Ticket colours (minutes)** with **Reset to defaults**, and the sound switch.

Never do this

- Never press **Ready** before the food or drink is really ready: the waiter will serve it.
- Never leave the screen signed in and unattended.

If something goes wrong

If you see a red banner **RECONNECTING - showing last known board**, the screen is showing old information and **cannot send changes**. It refreshes every 10 seconds. Keep working from the paper or call the waiters, and do not press buttons until it says **Live** again: the kitchen screen never saves changes for later.

If you see **Your account is not allowed to update tickets**, you have a view-only account: tell your supervisor.

To mark an item sold out (86), check with IT whether your screen offers it; otherwise ask a manager to switch the item's availability off in the admin portal (chapter 13).

ON THE FLOOR

10 Sports Entrance and Sports Store attendants

Your job: at the gate, check that a QR ticket is real and allow entry. At the store, hand out and take back the equipment a customer paid for.

Your device: a tablet set up by IT as **Sports Entrance scanner** or **Sports Store**. You sign in with your own staff number and PIN; the ticket is what the scan checks. Scans always need a live connection: the tablet never guesses.

Sports Entrance

1. Open **Sports Entrance**. Point the camera at the customer's QR code. If the camera is not working, type the code in the field and press **Check**, or use a handheld scanner.
2. Read the full-screen result:

Result	What it means	What you do
VALID (with *Valid until…*)	A good ticket	Let them in
ALREADY USED	This ticket was used before	Do not let them in. Send them to Reception
EXPIRED	The ticket's time has passed	Do not let them in. Send them to Reception
NOT YET VALID (with *Valid from…*)	Too early	Ask them to come at the stated time
WRONG FACILITY	Ticket is for another place	Direct them to the right place
CANCELLED	The booking was cancelled	Do not let them in
STAFF APPROVAL	A supervisor must decide	Call a supervisor
NOT RECOGNISED	Not a SERI Resort ticket	Do not let them in
NO CONNECTION	The tablet cannot reach the server	Press **Try again**. Do not guess

The system decides the result. The **What you do** column is the recommended house rule: your supervisor can change it.

3. Press **Scan next**. **Recent scans** lists what you scanned this session.

A group booking has one QR per person. A screenshot of the QR works.

Sports Store

1. Open **Sports Store**. Press **Scan or type entitlement QR**, or **Next customer**.

2. The screen says **This is exactly what was paid for / rented:** and lists the items.
3. **Releasing:** tick the items you hand over and press **Release selected (n)**. Items show RELEASED.
4. **Returning:** tick the items that came back, set the **Condition** (OK, **Damaged** or **Lost**) and press **Record return (n)**. Items show RETURNED.
5. If the screen says **This entitlement is CANCELLED. Do not release anything.**, do not hand out anything.

The system blocks releasing the same item twice and shows you its message.

Never do this

- Never let someone in or hand out equipment when the tablet shows **NO CONNECTION**.
- Never release more than the screen lists.
- Never skip recording **Damaged** or **Lost**: the store's record must show what really came back.

If something goes wrong

Scans and equipment releases are never saved for later. If the tablet is offline, wait for the connection or ask a supervisor to decide while you note the customer's booking reference. See chapter 18.

11

BACK OFFICE

Storekeeper and procurement

Your job: keep stock records true. The storekeeper receives, moves and counts stock. Procurement manages suppliers and purchase receipts.

Your device: a computer or tablet browser, admin portal, **Inventory** menu. You see only the screens your role allows; the rest are greyed out with the message **Needs permission**.

Where things are

Screen	What it is for	Who
Stock	Balances per location: *Location*, *Item*, *On hand*, *Reorder at*, *Updated*. **Export CSV** saves them	Storekeeper, manager
Stock receive and purchase receipt forms	Add stock that arrived. Scan or type the item code, add each line	Storekeeper, procurement
Transfers	Move stock between locations (for example Main Store to a facility store): **New transfer**	Storekeeper
Counts	Stock-take: **New count**, enter *Counted* against *Expected*, then **Post count**	Storekeeper
Adjustments	Correct stock after loss or damage: **Adjust stock**, with a *Kind* and a *Reason*	Storekeeper requests, supervisor approves
Suppliers	The supplier list: **Add supplier** with contact, phone and email	Procurement

Receiving stock

1. Open **Stock** and start the receive form. Pick the **Location**.
2. For each item, scan the barcode or type the item code, then enter the quantity (**Add a line** for more items).
3. Check the lines against the delivery note and submit.

Doing a stock count

1. Open **Counts** and press **New count**. Pick the location.
2. Count the shelf, then type what you found under **Counted**. The screen shows the **Variance** against **Expected**.
3. Press **Post count**. Only people allowed to post counts see it work; others see **You do not have permission to post counts.**

Correcting stock

Press **Adjust stock**, choose the location, kind and lines, and type the **Reason**. A supervisor must approve it before the balance changes. It shows under **Adjustments** as pending until then.

Things to know

- Stock leaves the shelf when an order is **sent** (at some facilities, when it is paid). A sale of something with no stock is refused.
- Transfers and counts are recorded, never deleted. Fix a mistake with a correcting entry, not by hiding the first one.
- The Sports Store releases and takes back rented equipment on the tablet (chapter 10), not here.

Never do this

- Never adjust stock to hide a shortage. Record the reason truthfully.
- Never post a count you did not do yourself.

Check with IT: the exact names of the submit buttons on the receive and transfer forms, so this chapter can be tightened after a walk-through on the live portal.

12

BACK OFFICE

Accountant

Your job: make sure the money recorded matches the money received, approve refunds and reversals, and produce the reports the owner relies on. You cannot sell or take payment.

Your device: a computer, admin portal at `https://admin.seriresorts.com` , **Finance** menu.

The Finance screens

Screen	Use it to
Payments	Find any payment and open its detail
Refunds & reversals	See money handed back. Large ones wait for your approval
Collected by waiters	See money waiters collected that a cashier has not yet confirmed
Cash handovers	See what waiters handed to cashiers, including **Cash in hand** per waiter
Cash sessions	Review each cashier's shift: float, expected cash, counted cash, difference
Settlements	Match card and transfer money against Paystack and bank settlements. There is a verify action for Paystack
Reports	Sales by day, facility, shift and transaction

The **Dashboard** gives a quick view: net sales, transactions, orders, refunds, payments by channel and **Needs attention**.

Daily routine

1. Open **Reports**, choose **Day**, pick yesterday and press **Apply**.
2. Read **Facilities on <date>**: *Orders*, *Gross*, *Discounts*, *Net sales*, *Refunds* and *Tickets*, with the **Property total**. Click a facility to drill down to shift and cashier, then the transaction. **Export CSV** to keep a copy.
3. Open **Cash sessions** and look at every shift with a difference.
4. Open **Collected by waiters**: anything still waiting for confirmation, or expired, needs a conversation with the cashier or supervisor.
5. Open **Approvals**: decide refunds and reversals waiting for you.
6. Open **Settlements** and reconcile what Paystack and the bank paid out.

For a month, use **Period revenue** (set *Period from* and *to*) to see revenue by facility, by payment method (captured, refunded, net) and by operating point.

Approving a refund or reversal

A cashier cannot refund by themselves; the request waits in **Approvals** (and on supervisors' devices). Check the payment, the reason and the amount, then approve or reject.

- A **refund** gives money back and does **not** reopen the order.
- A **reversal** cancels a payment and **does** reopen the order; it is only allowed within 24 hours.
- Money records can never be edited or deleted: every correction is a new entry.

Check with IT: Paystack refunds are currently only *recorded* for you to action manually in the Paystack dashboard. They are not sent to Paystack automatically.

Never do this

- Never approve a refund you cannot match to a payment.
- Never reconcile a settlement without checking the Paystack or bank figure.
- Never share your admin sign-in.

13

BACK OFFICE

Manager

Your job: run the property day to day: people, prices, facility rules and the numbers. You hold everything a supervisor can do, so you can approve and sign off.

Your device: a computer, admin portal at `https://admin.seriresorts.com` . You can also use the POS or a tablet like a supervisor.

Your daily routine

1. **Morning:** open the **Dashboard**. Read **Needs attention**, **Stock alerts** and the **Setup progress** card.
2. **Approvals:** clear anything waiting (the badge on **Approvals** shows how many).
3. **During the day:** watch **Orders**, **Tables** and **Bookings** (read-only views of what the tablets, POS and kitchen screens record). Check **Collected by waiters** for money waiting for a cashier.
4. **Evening:** check **Cash sessions** for differences and read the day's sales in **Reports** (chapter 12 explains how).

Setup jobs

These all live under the admin portal's **Setup** menu. Changes apply to new activity straight away; orders already open keep their old prices.

Add or change a product and price

1. **Catalog & prices**, then **Add product**. Fill in **Name**, **SKU** (must be unique, for example FD-JOL-CH), **Category**, **Kind** and the standard **Price**. Optionally set **Prepared by** (kitchen or bar), **Tax rate**, **Sold at** and **Track stock**. Press **Create product**.
2. To change a price, open the product and press **Set a new price**: give the **New price**, **Applies to**, **Facility** and **Starts on** (empty means now). The old price ends automatically.
3. **Where it is sold** lets you sell the item at another facility, with its own price if you like.

Mark an item sold out

Open the product, find **Where it is sold**, and switch availability off for that facility with a reason such as *Sold out*. Staff then see that reason when they try to sell it.

Change a facility rule

1. **Facilities**, open the facility, open its **Rules** tab.
2. Change the control you want. Only rules for features switched on under the **Capabilities** tab appear. **Reset to default** returns a control to the standard value.
3. Press **Save rules**.

The rules you will use most:

Rule	What it controls
Payment timing	Pay first, pay after service, or tab
Approval limit and which actions need approval	What reaches a supervisor
Cash session required	Whether cash needs an open drawer
Waiter cash collection, and the cash limit	Whether waiters may hold cash and how much
Allow offline orders, allow offline payments	What a terminal may do without the server (none, cash only, all)
Booking hold time	How long a held slot waits for payment

Waiter cash setting, per person

Open the person in **Staff**, card **Cash collected at tables**. **For this person** is *Inherit* the facility's rule, *Allow* or *Deny*. **Personal cash limit** sets how much they may hold before they must hand over. A waiter who may not hold cash sends cash customers to the cashier.

Membership plans

Membership plans, then **Add plan**: **Name**, **Code**, **Lasts (days)**, **Price**, **Member discount**, **Visit limit**, **Guests per visit**, **Book ahead**, **Grace after expiry**, **Renewal reminder**, **Valid at** and **On sale**. Members who already bought keep their original terms.

Business and receipts

Business & receipts holds the business profile, the text printed on receipts and the VAT setting.

Add a facility

Use **Add a facility**. The wizard asks for a template, a name, the capabilities, starting rules, operating points and a final review. The facility code cannot be changed afterwards.

Staff, devices and roles

Creating staff, setting PINs, granting roles and registering devices is the same for managers and the owner: see chapter 14.

Never do this

- Never change a price in the middle of service without telling the cashiers.
- Never give a role higher than your own; the system will not let you.
- Never turn on offline payments for card or transfer: they cannot be checked offline and the system does not queue them.

14

BACK OFFICE

Owner and IT administrator

Your job: the owner decides who may do what and sees everything. The IT administrator keeps devices, sign-ins and connections working; IT never handles finance, pricing or approvals. Managers can do the staff and device jobs below too.

Your device: a computer, admin portal at `https://admin.seriresorts.com` . The owner signs in from outside the property with an extra code (MFA).

Add a staff member and give them a way to sign in

1. **People > Staff > Add staff member**.
2. Fill in **First name**, **Last name** and **Staff number** (printed on their badge, for example S-0014). Phone and email are optional. Press **Create staff member**.
3. On their page, in the **Sign-in** card, set at least one of:
   - **New PIN** (4 to 8 digits, used on tablets and POS) then **Set PIN**.
   - **New password** (at least 8 characters) then **Set password**.
   - **NFC card**: tap the card on a reader or type its number, then **Assign card**. A card always needs the PIN too.
4. In **Roles and scopes**, choose the **Role**, then **Applies to** (the whole organisation, a site, or one facility) and which one, then **Grant role**.
5. Check that **Status** is **Active**.

The staff list shows which sign-ins each person has.

Reset a PIN or password

Open the person's page and set a new one. There is no old-PIN question and no recovery link, so be sure you are speaking to the right person. A locked account (five wrong tries) frees itself after 15 minutes.

When someone leaves, or a card is lost

- Set the person's **Status** to **Suspended** or **Ended**. Use **Remove card** for a lost card.
- If a tablet or POS is lost, open **People > Devices** and press **Revoke** on it. It is cut off even if someone is still signed in.

Register a new tablet, POS or kitchen screen

1. **People > Devices > Register a device**. Optionally choose the **Home facility**, then press **Issue registration code**.
2. A one-time code appears with its expiry. Type it on the new device. It works once.
3. After the device connects, use **Edit** on its row to set the home facility, mode and operating point. This applies the next time it connects.

If a device says the code was refused (a 422 message), it was already used or has expired: issue a new one. A tablet that says **Tablet role not resolved** needs **Reset tablet enrolment** and a new code.

Fingerprint or face terminals are registered under the same screen with their serial number, name, facility and protocol; their token is shown once. Card machines are under **Card machines > Add card machine**.

Pointing devices at a server

A device talks to one server at a time: the **online server** (on the internet) or the **property server** (inside the building). The tablet asks for the address the first time (**Connect to the resort server**).

To switch later without losing the tablet's enrolment, tap the title on the sign-in or lock screen **seven times quickly** to open **Connection**. Type the PIN if one was set, pick the server or type another address and press **Switch**. Each server keeps its own enrolment and sign-in, so switching back needs no new code. It refuses to switch while offline records are waiting; let them send first.

If the property server is switched off, nobody can sign in on devices that use it. Use the online server until it is back.

The database tool (IT only)

When it is installed, the database tool is reached only through a secure tunnel from your own computer, never from the public internet. Steps are in the VPS runbook of the infrastructure repository. Take a backup before editing any row, and prefer the read-only login for looking around.

Keeping watch

- **Audit log** (System menu) lists who changed what, with CSV export.
- **Sync & IT** shows whether the property server and the online server are in step.
- Sign-in security events (repeated failures, rejected collections) show up for the supervisors and for you.

Never do this

- Never share the owner or admin sign-in, and never write PINs on devices.
- Never leave a leaver's account **Active**.
- Never power off a machine you suspect was compromised: disconnect it from the network and call whoever manages security.
- Never publish demo accounts or demo PINs on a live server.

BACK OFFICE

15 Marketing and website editor

Your job: keep the public website fresh: pages, blog, events, gallery and the homepage, and answer the contact inbox.

Your device: a computer, admin portal, **Website** menu. It is hidden entirely if your role has no website permissions. Editing needs the edit permission, and publishing needs the publish permission, which IT staff do not have.

How content works

- Everything starts as a **Draft**. **Publish** makes it live. A scheduled item appears by itself at its date. **Archive** hides it without deleting. A published item must be archived before it can be deleted.
- All times are Lagos time.
- If you see **Someone else changed this**, reload to get the latest version and redo your change.

The Website screens

Screen	What it does
Site settings	Eight tabs: Brand, Contact, Opening hours, Social, SEO, Announcement bar, Booking labels, Footer. **Save settings** puts changes live at once. The brand name shown across the site is edited here
Homepage	Built from blocks. New blocks start switched off. Reorder them, then **Save order**
Pages, Blog, Events	A text editor with buttons and a live preview. Blog and Events need a title, a web address (slug) and search (SEO) text
Gallery	Albums. Save with **Save gallery**
Media library	Upload JPEG, PNG, WebP or AVIF pictures up to 8 MB. A picture still in use cannot be deleted
Messages	Contact-form messages. Mark them **Read**, **Replied** or **Spam** and add private notes
Subscribers	Newsletter list. Export to CSV (logged). Unsubscribe or erase on request; erasing is permanent

Publish a blog post

1. **Website > Blog**, add a post. Type the title, web address and SEO text, and write the body.
2. Add a picture from the **Media library**.
3. Press **Preview**, read it, then **Publish**. Or set a date to publish by itself.

Change the brand name or contact details

Open **Site settings**, **Brand** or **Contact**, change the text and press **Save settings**. No developer is needed.

Never do this

- Never publish prices or offers the facilities have not agreed.
- Never erase a subscriber unless they asked: it cannot be undone.
- Never upload someone else's photo without the right to use it.

REFERENCE

16 Helping customers who book or buy online

Customers can book courts, spa and salon slots, buy pool tickets and memberships on the website at `https://seriresorts.com`, with or without an account. Reception staff are the people they call, so this chapter says what the customer sees and what to do.

What customers can do

- Book a court, treatment or slot, **Hold this slot**, pay by Paystack and get a **QR ticket**.
- Buy pool day tickets (up to 20 per order, one QR per person) and memberships.
- Check out as a **guest** with only name, email and phone, or register an account (password of at least 10 characters, or Google or Facebook sign-in when enabled).
- Use **Find my booking** with the booking reference plus the email or phone used to book.
- Signed-in customers see **My bookings**, can cancel or reschedule when allowed, and download or print their tickets.

What to tell a customer who calls

The customer says	What to do
"I lost my ticket."	Ask for the **reference** from the confirmation page or email. Use **Find my booking** (reference plus email or phone), or press **Send it again** to resend the ticket. A screenshot of the QR also works
"The payment says it is taking longer than usual."	Say it will confirm shortly and they have not been charged twice. Ask them to wait a few minutes, then use **Find my booking**
"My slot expired while I was paying."	The slot is held for **10 minutes**. If someone else took it nothing is charged. If it expired during payment the site says the team has been told and will refund: take their reference and raise it with the cashier or accountant
"I want to cancel."	Online cancellation is only offered while the booking policy allows it. The page shows **Free cancellation until <time>** and **Refund if cancelled now**. Refunds go back to the original payment method
"I want a different time."	Only signed-in customers can reschedule online. A guest booking must be cancelled and rebooked, or handled by you at Reception
"The site says nothing has been charged, contact reception."	The booking system was unreachable. Help them book at the desk (chapter 7)
"It says please wait a minute."	Too many lookups or logins in a short time. Ask them to wait a minute and try again

Looking up a booking yourself

In the admin portal use **Bookings**, **Tickets & entry**, **Payments** and **Memberships** (read-only screens) to see what a customer bought and whether it was paid.

At the gate

The QR ticket shows its valid-from and valid-until time. The gate scanner checks it (chapter 10). Rented equipment is paid for at the venue; the customer shows the booking QR at the Sports Store.

Never do this

- Never promise a refund before you have checked the payment.
- Never ask a customer for their Paystack or bank details: the site never needs them from you.

Check with IT: the booking reference on the Find my booking page shows an example that begins with the old brand (`007–`). Confirm what a real reference looks like after the rename, and update this chapter.

17

REFERENCE

Money rules on one page

Money is only real once a cashier or the payment provider has confirmed it, every correction is a new entry, and every cash count is witnessed. Print this page and keep it at each till.

The life of an order

1. **Draft:** items are being added. Unsent items can still be removed.
2. **Sent:** the kitchen or bar has it. Items are locked.
3. **In preparation, then Ready:** the kitchen screen moves it along.
4. **Served:** the waiter marks it served.
5. **Paid (settled):** payment confirmed, receipt printed.

An order can be **voided** at any step before it is paid. A paid order needs a refund or reversal first.

How money moves at a table

1. Waiter prints the bill. **The order freezes.**
2. Waiter collects (cash, card machine, transfer) and records it on the tablet: **Pending cashier**.
3. A cashier checks the slip, alert or cash and presses **Confirm**: the order is settled and a receipt prints.
4. If it does not match, the cashier presses **Reject**: the bill stays unpaid and a supervisor is alerted.
5. If nobody confirms within 30 minutes the collection expires and the supervisors are alerted. Expired cash stays the waiter's responsibility.

Pay-link and per-bill transfer payments are confirmed by the payment provider; no person confirms them.

The rules

Situation	Rule
Printed bill	Bills say **BILL - NOT A RECEIPT**. Receipts are numbered like RCP-20261008-000123. A reprint is marked DUPLICATE
Changing a printed bill	Cancel the bill first. Waiters, bartenders and cashiers need a supervisor. It is refused while money is pending
Ways to pay	Cash (change given), card or POS terminal, bank transfer, pay link. Splits are allowed. The same card or transfer reference cannot be used twice. A part payment keeps the order open
Cashier's drawer	Open a cash session with a float. Cash needs an open session. Count blind at close. Only a supervisor or manager closes someone else's session
Waiter cash	Off by default. Allowed per facility or per person, with a limit. Over the limit, hand over first

Situation	Rule
Handing over cash	Waiter declares, cashier counts in front of them. A difference above N500 needs a supervisor's sign-off. You cannot receive your own handover or sign off one you received
Void	Unsent draft: no approval. Sent order: supervisor
Discount, comp, price change	Supervisor approval, unless within the facility's limit (discounts only)
Refund	Gives money back, does not reopen the order. Needs approval
Reversal	Cancels a payment and reopens the order. Only within 24 hours. Needs approval
Money records	Never edited or deleted. A correction is always a new entry
Card or transfer offline	Cannot be taken offline. Only cash, and only where the facility allows it

Staff sign-in limits

Five wrong PIN or password tries lock an account for 15 minutes. A card never works without its PIN.

REFERENCE

18 When things go wrong

First read the banner on your screen, then find it below. Do not repeat an action until you know whether it went through: repeating it is how double charges and duplicate orders happen.

Three different kinds of "offline"

What failed	What still works	What does not
The internet	Everything on the property: POS, tablets, kitchen screens, tickets, sign-in, stock	Online booking and the website portal, the admin portal from outside, card and mobile-money that need the internet
A device cannot reach the server (Wi-Fi or the server)	A small, safe set of actions, saved on the device (below)	Anything that needs a live answer
The server itself is off	Nothing can sign in on devices that use it	IT switches devices to the online server (chapter 14)

What each device saves while offline

Device	Saved and sent later	Never saved
Waiter tablet	New orders, cash and card-machine records. They show **PENDING CONFIRMATION** and **Saved on this tablet - pending sync**. Limit 50 actions or 30 minutes; beyond that: **Too many unsent actions. Reconnect to continue.**	Pay link, transfer, printing a bill, handing over cash, void, discount, approvals, sign-in, scans, equipment release and return
Cashier POS	Create order, add line, send order, open tab, and **cash-only** payments if the facility allows. Limit 200 entries or 30 minutes	Card, POS terminal, transfer, pay link, refunds, voids, discounts, approvals, cash-session actions, bookings, ticket scans
Kitchen screen	Nothing. Shows the last known board, read-only	Every change
Sports Entrance and Store	Nothing	Everything: a scan needs a live answer

A cash payment taken offline on the POS says **CASH SAVED ON THIS TERMINAL - NOT CONFIRMED**. Give the customer a handwritten acknowledgement, not a receipt. The **Queue** screen on the POS (**Waiting to be confirmed** and **Refused by the server (needs a person)**) shows what is waiting. It sends them in order when the connection returns. Press **Send now** to try again.

Messages and what to do

You see	Meaning and action
Cannot reach the server / Reconnecting to the server... showing last known data	Check Wi-Fi. Keep working only on what the device allows offline. Tell IT if it lasts more than a few minutes
You do not have permission to do that	Your role cannot do it. Ask a supervisor
A supervisor must authorise this	Tick **A supervisor is here** and let them sign in, or send the request to the supervisors' devices
Waiting for a supervisor to approve	The order is locked until they decide. Find a supervisor
No supervisor responded in time	The request is still pending. Check **Approvals** later
The bill is printed, so the order is frozen	A supervisor must reopen the bill to change it
Money was collected on this bill. Confirm or reject the collection before reopening the bill	Do that in **Collected by waiters** first
Print the bill first	A waiter can only collect after the bill is printed
Already collected by the waiter	Confirm or reject it in **Collected by waiters**. Do not take payment again
That is more than is left to collect on this bill	Part is already collected. Take only the remaining amount
Open a cash session before taking cash	Open **Cash session** first
Hand over your cash first	You reached your cash limit. Hand over to the cashier
This changed on another device. It has been refreshed	Someone else changed it. Look and try again
You cannot receive your own cash handover / The person who received the cash cannot sign off its variance	Ask another cashier or supervisor
That slot was just taken. Pick another / The hold expired	Pick or hold again (chapter 7)
Account locked after too many attempts	Wait 15 minutes or see a supervisor
Those credentials were not recognised	Re-type the staff number and PIN carefully. After five wrong tries the account locks for 15 minutes
This tablet has been revoked. Contact IT / This terminal is not registered or was revoked	IT must register the device again (chapter 14)
Tablet role not resolved	Press **Reset tablet enrolment** and ask IT for a new code
Enrolment failed (422)	The registration code was used or has expired. Ask IT for a new one
Something went wrong. Please try again	Try once more. If it repeats, tell a supervisor and note what you pressed

Who to call

- **Customer and money questions:** your supervisor.
- **Devices, sign-in, codes, network:** IT administrator.
- **Prices, rules, staff:** the manager.

19

REFERENCE

Glossary and quick reference

Word	Meaning
Approve / execute	To *execute* is to do or request an action. To *approve* is to allow it. Supervisors, managers and the owner approve; nobody approves their own request
Bill	The pre-payment slip, marked NOT A RECEIPT. Printing it freezes the order
Cash handover	A waiter giving the cash they hold to a cashier, counted in front of both
Cash session	A cashier's shift at the drawer: opening float, payments, count at close
Check out (a tablet)	Recording which facility and person a tablet is used by for this shift
Collected by waiter	Money a waiter took at a table. It is not paid until a cashier confirms it
Comp	An item given free (complimentary)
Device	A tablet, POS, kitchen screen or scanner registered with the system
Entitlement / QR ticket	The ticket or pass a customer scans to enter or collect equipment
Facility	A place that sells or serves: restaurant, spa, pool, reception and so on
Float	The cash already in a drawer when a shift starts
Hold	A slot kept for a customer for a short time while they pay
KDS	The kitchen or bar display screen
Local / property server	The server inside the building
Online server	The server on the internet that runs the website and admin portal
Order status	Draft, Sent, In preparation, Ready, Served, Settled (paid), Voided
Pending confirmation	Saved on a device, not yet accepted by the server
Reversal	Cancelling a payment and reopening the order (within 24 hours)
Settle	Pay and close an order or a tab
Step-up	A supervisor's one-time sign-in on someone else's device to approve one action
Tab	A customer account that collects orders to be paid once
Tender	One method of payment in a payment: cash, card, transfer, pay link

Word	Meaning
Variance	The difference between what was expected or declared and what was counted
Void	Cancel an unpaid order

Quick reference: who approves what

Action	Who approves
Void a sent order, comp, price change	Supervisor, manager, owner
Discount above the limit	Supervisor, manager, owner
Refund or reversal	Supervisor, manager, owner, accountant
Cancel or reopen a bill	Supervisor, manager, owner
Cash variance above N500	Supervisor, manager
Stock adjustment	Supervisor, manager, owner

About this manual

This is a first full edition, written from the system as built on 8 October 2026. Items marked **Check with IT** need confirming on the live system. The product is being renamed from 007 Resort & Spa to SERI Resort; some screens, receipts and the website may still show the old name until that change is released.
